

How GoCheck Kids Works

GoCheck Kids is an FDA-cleared, [Class IIe](#) medical device and meets the definition of an instrument-based ocular screener.

GoCheck Kids is a cloud-based system, where **image analysis** is done both **on the screening device (on-site)** and **remotely** on the GoCheck Kids' HIPAA-secure cloud:

- When a photoscreening is taken, the image is analyzed **on device (onsite)** and **analyzed on the remote GoCheck Kids mobile servers (GoCheck Kids cloud)**.
- After the image is analyzed both on the device and on remote GoCheck Kids mobile server, **results are presented to the user on the device**
- The image and results are immediately uploaded to our remote web servers and storage. **Results and images can be analyzed remotely by GoCheck Kids on this web server.**

If you have any questions, please contact us at accountmgmt@gobiquity.com.
